

Kheyti: 10 Years of Growth

Enabling climate-resilient livelihoods for smallholder farmers

Farmers Profile

Year

Crop Name

Total Farmers	Total Greenhouses	Total Cultivated Cycles	Average years with Kheyti	Regional Presence
5k	7k	31k	3	13

Data Scope: This analysis represents ~5,000 farmers with fully validated, high-quality crop records. The broader 7k reach includes units currently in the installation or initial nursery phases not yet reflected in the validated harvest datasets.

Farmers Profiles

A decade of scale: 6,830 greenhouses established with an average 2.71-year partnership duration, proving long-term model viability.

Inclusivity at Scale: Nearly 73.9% of the impact reaches Small Farmers, fulfilling the mission of supporting the most vulnerable archetypes.

Growth Over Time

Scalability Ready: The accelerating installation rate since 2022 demonstrates operational readiness to scale from thousands to the goal of one million farmers by 2033.

Top Crops by Volume

Crop Distribution by Farmer type

Market Versatility: Success in diverse crops like Cucumber, Chili and Tomato demonstrates the greenhouse's adaptability to local market demands.

Seasons per Greenhouse Distribution

Crop Diversification Hierarchy:

Utilization Mastery: 48% of the farming community has successfully transitioned from the 'trial phase' into long-term adoption (3+ seasons). This high retention rate proves the technology is not a one-time intervention, but a permanent pillar of the smallholder livelihood strategy.

Diversification Strategy: High crop variety across categories (Vegetables vs. Nursery) mitigates market price fluctuations and soil depletion, ensuring consistent year-round income for smallholders.

Cultivation Velocity (Days vs Cycles)

Operational Efficiency: Optimized crop durations allow farmers to complete more cycles per year, directly doubling annual income potential.

Regional Density Map

Regional Distribution

State	Farmers	Crop season number	Land holding by the farmer (in acres)
1. TELANGANA	1,344	9,741	8,813.23
2. JHARKHAND	955	6,417	6,947.89
3. MADHYA PRADESH	803	4,375	15,753.51
4. BIHAR	580	3,336	3,159.79
5. UTTAR PRADESH	490	3,457	5,090.51
6. ODISHA	359	1,971	2,389.98
7. RAJASTHAN	271	1,264	2,193.14
8. OTHERS	48	159	574.06
9. ANDHRA PRADESH	35	154	356.2

Deep Penetration: Strong density in Telangana and Jharkhand serves as the blueprint for national-scale implementation.

Strategic Hubs: Focusing on 8 key states (Telangana, Bihar, etc.) allows for localized advisory services, ensuring high success rates before national-scale expansion.

Drip Irrigation Adoption Rate (use of Drip)

Greenhouse Implementation Status

Resource Efficiency: While 21% are confirmed active drip users in current data, this climate-smart infrastructure is central to the model. Capturing reporting for the 'No Information' segment remains a priority for the 2026-2033 expansion.

Farmers Engagement Profile

Farmers Profile	Farmers	Average Cultivated Cycles	Different Crops	Average Structural Size	Average Land (Acres)	Average years with Kheyti
Small farmer (<5 acres)	3,638	2.43	75	300	2	3
Medium farmer (5 to 15 acres)	524	2.48	57	415	7	3
no information	298	2.04	47	292	4	2
Urban/Semi urban farmer	287	3.28	48	334	6	4
Large farmer (>15 acres)	130	3.28	41	554	26	3
Dealer	8	3.61	13	476	8	4
Grand total	4,885	2.5	80	324	4	3

Farmers Retention & Loyalty

Sustained Livelihoods: With an average 3-year partnership and consistent multi-cycle utilization, the Greenhouse-in-a-Box has evolved from a one-time installation into a reliable, long-term income engine for smallholders
